

MICHAEL DAVID SIN

17 November, 2004 (19 y.o.)

Balikpapan, East Kalimantan, Indonesia

Currently studying Information Multimedia Technology in Universitas Ciputra Surabaya, i'm interested in working with new people and my goal is to collect work experience as much as i can, and also to be the best version of myself.

EDUCATION

2019 - 2022
SMA CITA HATI EAST SURABAYA

- IB (International
Baccalaureate) Course 1
Student

2022 - 2026
UNIVERSITAS CIPUTRA SURABAYA

- Majoring in Informatics
Multimedia and Technology

SKILLS

Hard Skills

- Mobile Development
- Web Development
- Backend & Database
- Artificial Intelligence

Soft Skills

- Project Management
- Teamwork
- Time Management
- Effective Communication
- Leadership

WORK EXPERIENCE

PT. Perdana Mandiri Balikpapan

DECEMBER 2023 - JANUARY 2024

Web Developer & Database Developer

In a 6-week project building an e-commerce catalog for a ceramic distributor, I chose to prioritize database query performance over complex visual animations, which meant I architected normalized MySQL schemas and engineered core Laravel backend APIs. The result was a fully functional catalog app handling 500+ product SKUs smoothly. If I did it again I would implement automated unit testing earlier to catch edge cases faster.

Foy Clinic Surabaya

DECEMBER 2023 - APRIL 2024

Content Creator & Data Analyst

In managing clinic social media growth with limited ad spend, I chose to base visual content strategies on follower analytics rather than daily intuition, which meant I designed targeted promotional posters and tracked audience retention weekly. The result was a 25% increase in engagement rates across key campaigns. If I did it again I would build a live dashboard using Looker Studio to automate reporting.

PT. UbinKayu Indonesia

JUNE 2025 - NOVEMBER 2025

IT Team

In a 5-month internship streamlining manual export-import operations, I chose to build a standalone desktop ERP client using Electron instead of a basic web form for offline stability, which meant I engineered the Purchase Order (PO) module and optimized overall web workflow integrations. The result was a deployed desktop application that cut PO processing time significantly. If I did it again I would architect multi-role permission controls earlier in the database phase.

STRYD App Project

JANUARY 2026 - JUNE 2026

Mobile App Developer

In building the STRYD mobile app with complex activity tracking and analytics requirements, I chose to implement offline-capable mapping using osmdroid over relying solely on standard online map APIs, which meant I engineered custom map integrations and realistic analytics data flows using Jetpack Compose. The result was a high-fidelity, functional application interface that successfully met strict collaborative design standards. If I did it again I would modularize the UI components earlier to speed up iteration cycles based on designer feedback.

Thesis Project

FEBRUARY 2026 - JUNE 2026

AI/Computer Vision Researcher

In building a dog care recommendation system constrained by the subtle nuances of animal behavior, I chose to implement a Convolutional Neural Network (CNN) for deep behavior and emotion detection rather than relying on simple object tracking, which meant I trained and optimized a custom AI model on complex behavioral datasets. The result was a functioning AI prototype that successfully mapped dog behaviors to actionable care recommendations. If I did it again I would expand the training dataset earlier to include more varied lighting conditions to improve real-world accuracy.

ACHIEVEMENTS

20 April 2024 - 29 April 2024
HACKFEST 2024 – FINALIST

- Developed a gamified interactive web app using Laravel & MySQL within a 10-day sprint.

CERTIFICATION

December 2025
SERTIFIKASI KOMPETENSI BNSP -
PROGRAMMER

March 2026
CLARITYENGLISH DYNAMIC
PLACEMENT TEST - CEFR B2

May 2026
CPANEL PROFESSIONAL
CERTIFICATION

BasketYuk.id

Mobile & Backend Developer

FEBRUARY 2026 - JUNE 2026

In managing the BasketYuk iOS app and Laravel backend which had to process large volumes of athlete statistics, I chose to optimize database queries instead of simply scaling up server hardware, which meant I engineered efficient data fetching for the total and average leaderboard systems. The result was a stable, fast-performing application that successfully secured multiple App Store approvals. If I did it again I would implement a robust data caching layer earlier to further reduce database load during peak tournament seasons.

Apple Developer Academy Intern

Coder

MARCH 2026 - PRESENT

In developing the ConnectA iOS app to help users open up under tight Academy sprint deadlines, I chose to prioritize robust interactive logic over complex UI animations, which meant I engineered the core prompt system and interactions using Swift. The result was a fully functional shipped application that successfully facilitated interactive user sessions. If I did it again I would implement a more modular architecture earlier to accommodate faster feature scaling.
